PROFESSIONAL SUMMARY

Frontend Developer with 5+ years of experience building data-rich dashboards and interactive UIs across web and mobile. Expert in React, React Native, TypeScript, Node.js, and NestJS with deep expertise across the modern JavaScript ecosystem. Proven track record of architecting reusable component and data-visualization libraries, building production mobile apps with Expo, and owning features end to end from data model to UI. Has shipped across the full company-stage spectrum — from enterprise SaaS platforms (Totango) to early-stage startups built from zero to launch (HippoCamera). Deep practitioner of AI-assisted development workflows, configuring MCP servers and building custom slash commands, subagents, and skills to accelerate delivery and code quality, combined with a leadership background from military service. Multilingual professional fluent in Armenian and Russian, with professional working English (B2).

TECHNICAL SKILLS

Frontend: React, React Native, Next.js, TypeScript, JavaScript, Tailwind CSS, Material UI, Storybook

Data Visualization: D3.js, Chart.js, Recharts

State Management: Redux, Zustand, React Query, Context API, MobX

Backend: Node.js, NestJS, REST APIs, GraphQL

Databases: PostgreSQL, MongoDB

Cloud & DevOps: AWS, Docker, GitHub Actions (CI/CD)

Testing & Build: Jest, Playwright, Cypress, Vite, Webpack

AI & Tools: Claude (Claude Code), GitHub Copilot, ChatGPT, MCP servers (Figma, GitHub, Playwright, Atlassian, Notion, Sentry, Slack, Context7)

WORK EXPERIENCE

Senior Frontend Developer

May 2023 – Mar 2026

Totango

- Built a shared React and Vue.js component layer, extracting duplicated UI into a single versioned internal package so feature teams across three enterprise apps consumed one source of truth instead of re-implementing the same elements
- Designed the API integration layer on TanStack Query with query-key-scoped caching, in-flight request deduplication, and background refetch, cutting redundant API calls by ~40%
- Led the Vuex-to-Pinia migration, converting mutation-based stores to typed Pinia stores with composable getters and actions and removing the global mutation side-effects that were causing cross-module state bugs
- Drove the Catalyst AI-development initiative: defined the repository structure, agent and prompt conventions, and code-review automation that the team standardized on for AI-assisted feature work

Frontend Developer (Part-time)

May 2023 – Jan 2025

Nsoft

- Built a data-visualization suite of reusable chart components (line, bar, pie, and combo charts) with a theming layer that maps each brand's color and typography tokens onto the charts at render time
- Instrumented chart hover and drill-down interactions with event tracking so the product team could see which metrics users actually engaged with

Full Stack Developer (Part-time)

Jan 2023 – Dec 2025

HippoCamera

- Architected the end-to-end memory-capture platform — React Native mobile app, Strapi backend, and TanStack Start admin dashboard — owning the data flow from on-device capture through backend processing to the admin review surface
- Built production-ready React Native app using Expo Router v5 with offline-first architecture, Zustand state management, and sophisticated media recording capabilities

- Implemented video/audio recording, file upload queues with presigned URLs, push notifications, and geolocation services with a 3-agent development workflow
 - Hand-built a custom offline-first sync queue (before AI coding tools existed) for memory, replay, and media-upload events — a FIFO action state machine where each queued action carries its own HATEOAS-style fulfilled/rejected transitions, with exponential-backoff retries (3 attempts, 1s base), per-asset retry tracking, and rate-limited draining
 - Wrote 10+ custom facade and adapter modules wrapping Expo and React Native packages (file system, permissions, notifications, image picker, geolocation, network) so legacy, non-Expo-compatible libraries ran in a fully managed Expo workflow — hiding iOS sandbox-path rotation, Android storage-migration dual paths, per-API-level permission enums, and iOS/Android notification-scheduling differences behind one interface
 - Developed custom MCP server wrapping Figma's MCP for intelligent design-to-code conversion, mapping design components to React Native code
 - Automated end-to-end mobile UI tests with Maestro and accelerated delivery with MCP-driven tooling — the XcodeBuild MCP for iOS build/automation and the Chrome MCP for browser workflows.
- Tech:** React Native, Expo, Maestro, TypeScript, Zustand, TanStack Query, Strapi, Node.js, PostgreSQL

Frontend Developer

May 2022 – Apr 2023

Smart Corner Armenia

- Developed an interactive video application with a responsive UI using React.js
- Built reusable components and optimized rendering performance for a seamless user experience
- Maintained a clean and scalable application architecture while actively debugging and resolving issues

Frontend Developer

Feb 2021 – May 2022

Nellie Health

- Led development of the admin dashboard, overseeing design, architecture, and implementation across both frontend and backend
- Collaborated closely with developers, designers, and stakeholders to gather requirements and align the dashboard with user needs
- Built and integrated APIs to connect the dashboard with external systems and data sources, backed by a scalable database schema
- Continuously monitored, optimized, and enhanced the dashboard based on user feedback and evolving business requirements

Major

Aug 2015 – Mar 2025

Ministry of Defence of the Republic of Armenia

- Led an 8-person team to ensure information security and stable service delivery in mission-critical environments
- Performed cyber threat analysis using advanced datasets and security tools to identify and mitigate risks
- Developed scalable intelligence-gathering systems to support proactive cybersecurity operations

EDUCATION

Bachelor's Degree in Engineering, Military University of Radio Electronics

September 2010 – June 2015
