Hayk Ter-Markosyan, Frontend Developer | Building Responsive and Accessible Web Experiences

Frontend Developer with 5+ years building data-rich dashboards and interactive UIs in React and TypeScript. Experienced across the full stack with Node.js and NestJS. Deep practitioner of AI-assisted development — configuring MCP servers, building custom slash commands, subagents, and skills to automate engineering workflows. Proven delivery in fast-paced startup environments, combined with a leadership background from military service.

AI & Development Optimization

AI Tools: Claude (Claude Code), GitHub Copilot, ChatGPT

MCP Servers Configured: Figma, GitHub, Playwright, Atlassian (Jira/Confluence), Notion, Sentry, Slack, Context7, and others — integrated directly into daily engineering workflow

Custom Slash Commands: Built task-specific commands to automate recurring work — e.g., converting HTML/design specs directly into React Native components, PR review pipelines, and documentation generation

Custom Agents & Skills: Implemented specialized subagents and skills for domain-specific problems — e.g., a Backend API Expert agent that analyzes backend architecture, traces endpoints, and surfaces integration points for frontend work; code-review, simplifier, and exploration agents

Prompt Engineering: Advanced context-aware prompt crafting for code generation, refactoring, and review

Workflow Optimization: AI-assisted coding, review, documentation, and tooling automation — treated as a first-class engineering skill alongside core tech stack

Technical Skills Frontend

Core: React, React Native, Next.js, TypeScript, JavaScript

UI Frameworks: Tailwind CSS, Material UI, Storybook

Mobile: React Native

Data Visualization: D3.js, Chart.js, Recharts

State Management: Redux, Zustand, React Query, Context API, MobX

Testing: Jest, Playwright, Cypress

Build Tools: Vite, Webpack

Backend & Infrastructure

Framework: Node.js, NestJS

Databases: PostgreSQL, MongoDB

API Design: RESTful APIs, GraphQL

Cloud & DevOps: AWS, Docker, GitHub Actions (CI/CD)

Employment History

Freelance Full Stack Developer (via Upwork), Yerevan, Armenia

May 2023 — Present

- *Developing and maintaining a platform for users to plan and book photo shoots*
- *Working across the full stack using React and Node.js*
- *Implementing features including user registration, photo uploading, and booking scheduling*
- *Optimizing the platform for performance and scalability; resolving bugs and security vulnerabilities*

Frontend Developer at Smart Corner Armenia, Yerevan, Armenia

May 2022 — April 2023

- *Developed an interactive video application with a responsive UI using React.js*
- *Built reusable components and optimized rendering performance for a seamless user experience*
- *Maintained a clean and scalable application architecture while actively debugging and resolving issues*

Frontend Developer at Nellie Health

February 2021 — May 2022

- *Led development of the admin dashboard, overseeing design, architecture, and implementation across both front-end and back-end*
- *Collaborated closely with developers, designers, and stakeholders to gather requirements and align the dashboard with user needs*
- *Designed and implemented an intuitive, user-friendly interface to enhance the overall user experience*
- *Built and integrated APIs to connect the dashboard with external systems and data sources*
- *Developed a scalable and efficient database schema to support dashboard data operations*
- *Continuously monitored, optimized, and enhanced the dashboard based on user feedback and evolving business requirements*

Frontend Developer at SoftConstruct

March 2020 — February 2021

- *Built and maintained user interfaces of web applications with a focus on performance and usability*

- *Translated design concepts into responsive and accessible code in close collaboration with UI/UX designers*
- *Wrote clean, maintainable, and efficient HTML, CSS, and JavaScript code following best practices*
- *Conducted thorough testing and debugging to deliver high-quality, reliable software*
- *Optimized web applications for speed, scalability, and cross-browser compatibility*

Major at Ministry of Defence of The Republic of Armenia

August 2015 — March 2025

- *Led an 8-person team to ensure information security and stable service delivery in mission-critical environments*
- *Performed cyber threat analysis using advanced datasets and security tools to identify and mitigate risks*
- *Developed scalable intelligence-gathering systems to support proactive cybersecurity operations*

Unique Strengths

Sees design systems as puzzles, not problems — loves building reusable UI components

TypeScript enthusiast — catching bugs before they're even born

Storybook fan — believes every component has a story worth documenting

Knows consistency and iteration always win — like earning a Brazilian Jiu Jitsu black belt

Education

Bachelor's Degree in Engineering

Military University of Radio Electronics · January 2010 — January 2015

Languages

Armenian — Native

Russian — Native

English — B2 (Upper-Intermediate)

Hobbies

Brazilian Jiu Jitsu — Athlete and Coach
